

Bracketless Portal System

Our unique, patented Bracketless Portal System is constructed using cold-formed flat Z450 galvanised coil. Typical clearspans range from 9m to 30m.

Tapered Box Beam Structure

The Tapered Box Beam is manufactured by folding two halves of steel plate and welding them together to form a box. The box is tapered through its length, utilising only the amount of steel required, which reduces the weight/cost without affecting structural integrity. Using the Tapered Box Beam, spans range from 20m to 75m.

BESPOKE LIFESTYLE BUILDINGS

© BETTER STEEL BUILDINGS ©

We know that a one-size-fits-all approach is outdated, which is why we've developed two innovative portal systems.

Both systems give unlimited options for size, architectural design, and functionality, meaning the lifestyle building of your dreams is a lot closer than you thought.
